

Specialty product selector

PRISM POWDER COATINGS LTD.

TRUE BOND (TB) is Prism Powder Coatings' trademark assuring you top quality and consistent bonding of metallic and mica.

The process of bonding involves a separate, specific step that fuses the metallic pigment to the powder particles ensuring an even, easy to apply product that is reclaimable.

The aluminium chips on this card are powder coated for accurate depiction of appearance and finish. Some variance may result from application conditions.

We recommend clear coating of all metallics for extended durability.

Visit the Prism Powder Coatings' RAL store. 184 RAL classics available in 5 different finishes with quick turn around.
